

**Tuck Creek Flood Mitigation, Phase 2
New Street Bridge Upgrade and Channel Works**

Notice of Public Information Centre

The City of Burlington completed the Tuck Creek Flood Assessment and Crossing Upgrades Municipal Class Environmental Assessment Study (hydro corridor north of New Street to Spruce Avenue) in June 2016. The study was completed following the extreme rain storm on Aug. 4, 2014 during which significant creek flooding occurred in this area. The Study's recommendations include stormwater infrastructure improvements to reduce the flooding risk. The recommended works were divided into three phases. Phase 1, which includes the Regal Road bridge upgrade and channel works between New Street and Spruce Avenue, is currently under construction and will be completed in the of summer 2019.

Phase 2

Phase 2 includes upgrading both the New Street bridge and the creek channel (from the hydro corridor to south of New Street). Construction is anticipated to begin in July 2019.

You are invited to a Public Information Centre (PIC) where you can discuss the project and get more information on the details of the design and upcoming construction, including limits of construction, site access, tree preservation and plantings.

**Wednesday March 20, 2019
6:00pm to 7:30pm
Burlington Seniors' Centre (Wellington Room)
2285 New Street, Burlington**

If you are unable to attend, you may view the drawings on the City of Burlington website at www.burlington.ca/, following the PIC.
